Write the formula for the area of each shape:

Triangle $A_{\Delta} = \frac{b \cdot h}{2}$

Square $A_{\square} = s^2$

Rectangle $A_{\square} = l \cdot w$

Circle $A_{\circ} = \pi r^2$

Compute the area:

1. A triangle with base 18cm and height 4cm.

$$A_{\Delta} = \frac{b \cdot h}{2} = \frac{18\text{cm} \cdot 4\text{cm}}{2} = 36\text{cm}^2$$

3. A rectangle with side lengths 19u and 12u.

$$A_{\square} = l \cdot w = (19u)(12u) = 228u^2$$

2. A square with side length 10cm.

$$A_{\square} = s^2 = (10\text{cm})^2 = 100\text{cm}^2$$

4. A circle with radius 2.5m.

$$A_{\circ} = \pi r^2 = \pi (2.5\text{m})^2 = \pi (6.25\text{m}^2) = 19.6\text{m}^2$$

Solve for the missing value:

- 1) A triangle with area 60cm² and base 40cm.

$$A_{\Delta} = \frac{1}{2}bh \quad 60\text{cm}^2 = \frac{1}{2}(40\text{cm})h$$

$$60\text{cm}^2 = \frac{1}{2}(40\text{cm})h \quad \div 20\text{cm} \quad \div 20\text{cm}$$

$$3\text{cm} = h$$

- 3) A rectangle with area 14cm² and side 100cm.

$$A_{\square} = l \cdot w \quad 14\text{cm}^2 = (100\text{cm}) \cdot w$$

$$\div 100\text{cm} \quad \div 100\text{cm} \quad 0.14\text{cm} = w$$

- 2) A square with area 169cm².

$$A_{\square} = s^2 \quad 169\text{cm}^2 = s^2$$

$$\sqrt{\quad} \quad \sqrt{\quad} \quad 13\text{cm} = s$$

- 4) A circle with area 900cm².

$$A_{\circ} = \pi r^2 \quad 900\text{cm}^2 = \pi r^2$$

$$\div \pi \quad \div \pi \quad 286.5\text{cm}^2 = r^2$$

$$\sqrt{\quad} \quad \sqrt{\quad} \quad 16.9\text{cm} = r$$
